Rockwood Wealth Management & The Informed Investor

Achieving All That Is Important to You

Money means different things to different people. All of us have different dreams. You may want to achieve financial freedom so that you never have to work again—even if you plan on working the rest of your life. You may want to make a top-level college education possible for your children or grandchildren. You might want to provide the seed capital that will give your children or grandchildren a great start in life, whether that's with a home or a business.

You may dream of a vacation home on the beach or in the mountains. Or you may have achieved tremendous success throughout your career and believe that it's important to leave a legacy that lives on. You want to leave something behind for your favorite charity that will enable it to continue on with its good work. Whatever your dreams are, they are important to you, which makes them extremely worthwhile. What you are reading this moment will better enable you to make smart decisions about your money so that you can achieve all that's important to you.

Rising Above the Noise

Unfortunately, most investment professionals work very hard to make their work extremely confusing. They have a vested interest in creating investor confusion. They use jargon designed to intimidate you and make it difficult for you to understand. But investing is actually not that complicated. It can be broken down into two major beliefs:

- You believe in the ability to select superior investments, or you don't.
- You believe in the ability to time markets, or you don't.

Let's explore which investors have which belief systems and where you should be with your own beliefs. Exhibit 1 classifies people according to how they make investing decisions. Quadrant one is the *noise quadrant*. It's composed of investors who believe in both market timing and superior investment selection. They think that they (or their favorite financial guru) can consistently uncover mispriced investments that will deliver market-beating returns. In addition, they believe it's possible to identify the mispricing of entire market segments and predict when they will turn up or down. The reality is that the vast majority of these methods fail to even *match* the market, let alone beat it, particularly after cost. Unfortunately, most of the public is in this quadrant because the media play into this thinking as they try to sell newspapers, magazines and television shows. For the media, it's all about getting you to return to them time and time again.

Quadrant two is the *conventional wisdom quadrant*. It includes most of the financial services industry. Most investment professionals have the experience to know they can't predict broad market swings with any degree of accuracy. They know that making incorrect predictions usually means losing clients. However, they believe there are thousands of market analysts and portfolio managers with MBAs and high-tech information systems who can find undervalued securities and add value for their clients.

Of course, it's the American dream to believe that if you're bright enough and work hard enough, you will be successful in a competitive environment. Unfortunately, as un-American as it seems, in an efficient capital market this methodology adds no value, on average. Study after study shows that capital markets work.

Rockwood Wealth Management & The Informed Investor

EXHIBIT 1 THE INVESTMENT DECISION MATRIX

		Market Timing	
		Yes	No
Security Selection	Yes	Noise Quadrant 1 Most individual investors Financial journalists	Conventional Wisdom Quadrant 2 Financial planners Stock brokers Most mutual funds
	No	Tactical Allocation Quadrant 3 Pure market timers Asset allocation funds	Information Quadrant 4 Academics 40% of institutional investors

Quadrant three is the *tactical asset allocation quadrant*. Investors in this quadrant somehow believe that, even though individual securities are priced efficiently, they (and only they) can see broad mispricing in entire market sectors. They think they can add value by buying when a market is undervalued, waiting until other investors finally recognize their mistake, and selling when the market is fairly valued once again. We believe that it's inconsistent to think that individual securities are priced fairly, but that the overall market, which is an aggregate of the fairly priced individual securities, is not. No prudent investors are found in this quadrant.

Quadrant four is the *information quadrant*. This is where most of the academic community resides, along with 40 percent of institutional investors. Investors in this quadrant dispassionately research what works and then follow a rational course of action based on empirical evidence. Academic studies indicate that the average returns of the three other quadrants are negative, not positive. This is due to high turnover, which results in additional trading costs and higher taxes. Quadrant four is where you should be, and where you'll find all prudent investors. Our goal is to help investors make smart decisions about their money so that they are firmly in place in quadrant four. To accomplish this, we help investors move from the noise quadrant to the prudent investor quadrant. This is where you should be if you want to maximize the probability of achieving all your financial goals.

Rockwood Wealth Management & The Informed Investor

Five Key Concepts to Investment Success

While investing can, at times, seem overwhelming, the academic research can be broken down into what we call the Five Key Concepts to Investment Success. If you examine your own life, you'll find that it is the simpler things that consistently work. Successful investing is no different. However, it is easy to have our attention drawn to the wrong issues. These wrong issues can derail our journey as we attempt to achieve all that is important to us. In this section, we'll walk through these five concepts and then explain how successful institutional investors incorporate each of these concepts into their investment plans, no matter which direction the markets are going at the moment.

Concept One: Utilize Diversification Effectively to Reduce Risk

Most people understand the basic concept of diversification: Don't put all your eggs in one basket. However, no matter how sophisticated you are, it's easy to get caught in a trap. For example, many investors had a large part of their investment capital in their employer's stock during the recent downturn. Even though they understood that they were probably taking too much risk, they didn't do anything about it. They justified holding the position because of the large capital gains tax they would have to pay if they sold, or they imagined that the stock was just about ready to take off. Often, investors are so close to a particular stock that they develop a false sense of comfort. Over the last three years many an investor has felt the pain of not being a prudent investor.

Other investors believe that they have effectively diversified because they hold a number of different stocks. They don't realize that they are in for an emotional roller-coaster ride if these investments share similar risk factors by belonging to the same industry group or asset class.

"Diversification" among many high-tech companies is not diversification at all. To help you understand the emotions of investing and why most investors systematically make the wrong decisions, let's look for a moment at what happens when you get a hot tip on a stock. (See Exhibit 2.) If you're like most investors, you don't buy the stock right away. You've probably had the experience of losing money on an investment—and did not enjoy the experience—so you're not going to race out and buy that stock based on a hot tip from a friend or business associate right away. You're going to follow it awhile to see how it does.

Let's assume, for this example, that it starts trending upwards. You'll watch it a little longer to see how it does. How do you feel? You hope that this might be the one investment that helps you make a lot of money. Let's say it continues its upward trend. You start feeling a new emotion as you begin to consider that this just might be the one. What is the new emotion? It's greed. You decide to buy the stock that day. You know what happens next. Of course, soon after you buy it, the stock starts to go down, and you feel a new combination of emotions—fear and regret. You're afraid you made a terrible mistake. You promise yourself that if the stock just goes back up to where you bought it, you will never buy like this again. You don't want to have to tell your spouse or significant other about it. You don't care about making money anymore.

Now let's say the stock continues to go down. You find yourself with a new emotion. What is it? It's panic. You sell the stock. And what happens next? New information comes out and the stock races to an all-time high.

Rockwood Wealth Management & The Informed Investor

We're all poorly wired for investing. Emotions are powerful forces that cause you to do exactly the opposite of what you should do. That is, your emotions lead you to buy high and sell low. If you do that over a long period of time, you'll cause serious damage to not just your portfolio, but more importantly, to all your financial dreams.

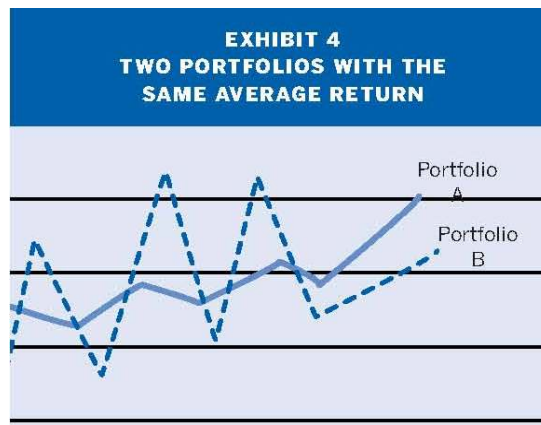

Rockwood Wealth Management & The Informed Investor

Concept Two: Dissimilar Price Movement, Diversification Enhances Returns

If you have two investment portfolios with the same average or arithmetic return, the portfolio with less volatility will have a greater compound rate of return. For example, let's assume you are considering two mutual funds. Each of them has had an average arithmetic rate of return of eight percent over five years. How would you determine which fund is better? You would probably expect to have the same ending wealth value. However, this is only true if the two funds have the same degree of volatility. If one fund is more volatile than the other, the compound returns and ending values will be different. It is a mathematical fact that the one with *less* volatility will have a *higher* compound return. You can see how this works from Exhibit 3.

EXHIBIT 3 CONSISTENCY BEATS VOLATILITY				
Year	Consistent Investment		Volatile Investment	
	Rate of Return	Ending Value	Rate of Return	Ending Value
1	8%	\$108,000	30%	\$130,000
2	8%	\$116,640	-20%	\$104,000
3	8%	\$125,971	25%	\$130,000
4	8%	\$136,049	-20%	\$104,000
5	8%	\$146,933	25%	\$130,000
Arithmetic return	8%		8%	
Compound return	8%		5.39%	

Two equal investments can have the same arithmetic rate of return but have very different ending values because of volatility. You want to design your portfolio so that it has as little volatility as necessary to achieve your goals. Exhibit 4 shows two portfolios with the same average return. As a prudent investor, you want the smoother ride of Portfolio A not only because it helps you ride out the emotional curve, but more importantly, because you will create the wealth you need to reach your financial goals.

Rockwood Wealth Management & The Informed Investor

Concept Three: Employ Asset Class Investing

Many investors feel that they could have executed better than they did during the last few years. Unfortunately, most investors are using the wrong tools and put themselves at a significant disadvantage to institutional investors. The average investor who uses actively managed mutual funds is trying to fix a sink with a screwdriver, when they really need a pipe wrench. You need the right tools.

Almost all investors would benefit by using institutional asset classes. An asset class is a group of investments whose risk factor and expected returns are similar. Originally, institutional asset class funds were not available to the great majority of investors. Often the minimum investment for these mutual funds was in the millions of dollars, effectively keeping them beyond the reach of all but the wealthiest investors. That was their goal because these funds were for institutional accounts, such as large pension plans.

There are four major attributes of institutional asset class funds that attract institutional investors:

1. Lower operating expenses
2. Lower turnover resulting in lower costs
3. Lower turnover resulting in lower taxes
4. Consistently maintained market segments

We'll look at each one in turn.

1. Lower Operating Expenses

All mutual funds and separately managed accounts have expenses that include management fees, administrative charges and custody fees. These are expressed as a percentage of assets. According to Morningstar, the average annual expense ratio for all retail equity mutual funds is 1.54 percent. In comparison, the same ratio for institutional asset class funds is typically only about one-third of all retail equity mutual funds. All other factors being equal, lower costs lead to higher rates of return.

2. Lower Turnover Resulting in Lower Cost

Most investment managers do a lot of trading, thinking that this adds value. The average retail mutual fund has a turnover ratio of 83 percent. This means that, on average, 83 percent of the securities in the portfolio are traded over a 12-month period. This represents \$83,000 of traded securities for every \$100,000 invested. Higher turnover is costly to shareholders because each time a trade is made there are transaction costs, including commissions, spreads and market impact costs. These hidden costs may amount to more than a fund's total operating expenses if the fund trades heavily, or if it invests in small company stocks for which trading costs are very high. Institutional asset class funds have significantly lower turnover because their institutional investors want them to deliver a specific asset class return with as low a cost as possible.

Rockwood Wealth Management & The Informed Investor

3. Lower Turnover Resulting in Lower Taxes

If a mutual fund sells a security for a gain, it must make a capital gains distribution to shareholders because mutual funds are required to distribute 98 percent of their taxable income each year, including realized gains, to stay tax-exempt at the corporate level. They distribute all their income annually because no mutual fund manager wants to have his or her performance reduced by paying corporate income taxes.

In one study, Stanford University economists John B. Shoven and Joel M. Dickson found that taxable distributions have a negative effect on the rate of return of many well-known retail equity mutual funds. They found that a high tax-bracket investor who reinvested the after tax distribution ended up with an accumulated wealth per dollar invested of only 45 percent of the fund's published performance. An investor in the middle tax bracket realized just 55 percent of the published performance. Because institutional asset class funds have lower turnover, they have significantly lower taxes.

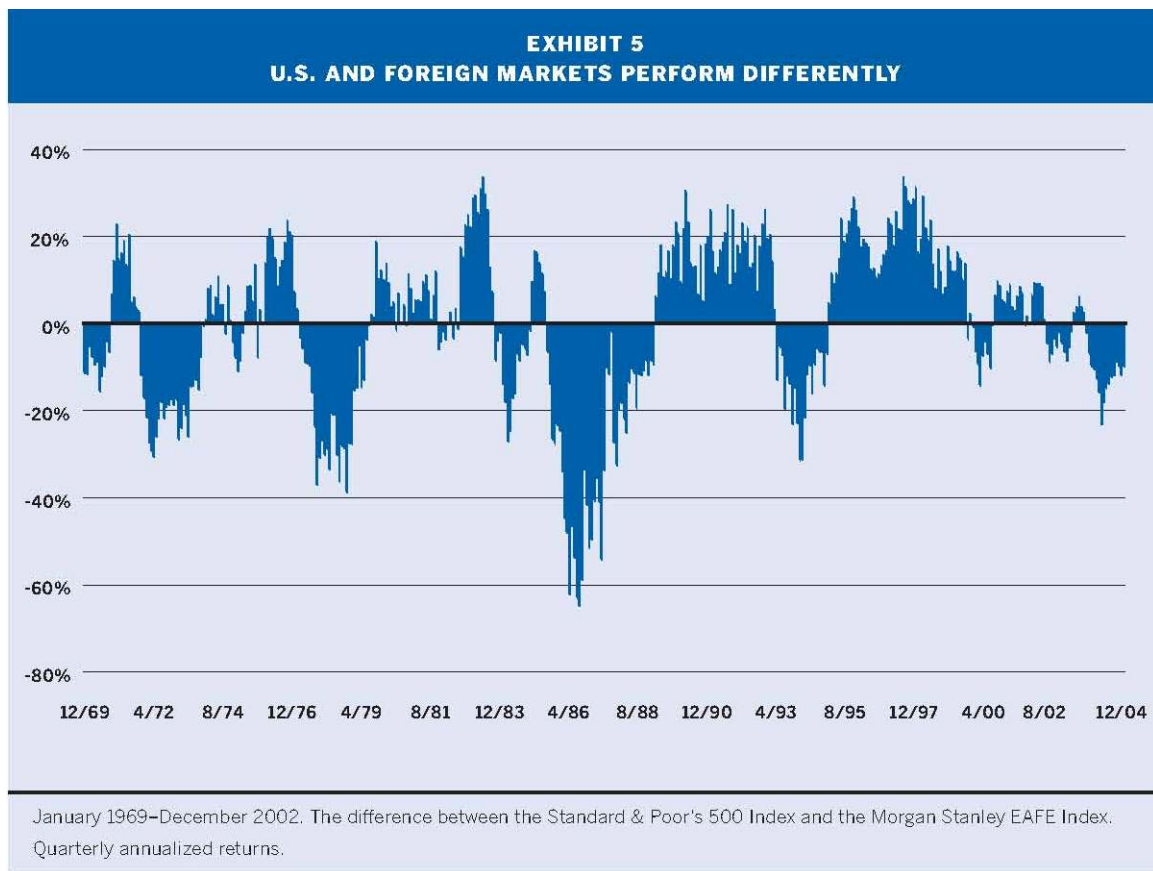

4. Consistently Maintained Market Segments

Most investment advisors agree that the greatest determining factor of performance is asset allocation—how your money is divided among different asset categories. However, you can only accomplish effective asset allocation if the investments in your portfolio maintain consistent asset allocation. That means your funds need to stay within their target asset classes. Unfortunately, most retail funds effectively have you relinquish your control of your asset allocation. On the other hand, because of their investment mandates, institutional asset class funds must stay fully invested in the specific asset class they represent. Fortunately, these institutional asset class funds are now available to investors through fee-based financial advisors. You can gain the same advantages that previously only large institutional investors received.

Rockwood Wealth Management & The Informed Investor

Concept Four: Global Diversification Reduces Risk

We've all read about the concept of a "global village"—that we're getting closer and closer together. Technology is creating a new paradigm in which businesses around the world are tied together, just as markets are now tied together. Then why should you include an international institutional asset class in your portfolios? The answer is that American equity markets and international markets do not move together. Individual stocks of companies around the world with similar risk have the same expected rate of return. However, they don't get there in the same manner or at the same time. As you can see from Exhibit 5, there are tremendous dissimilar price movements between international and U.S. asset classes.

Rockwood Wealth Management & The Informed Investor

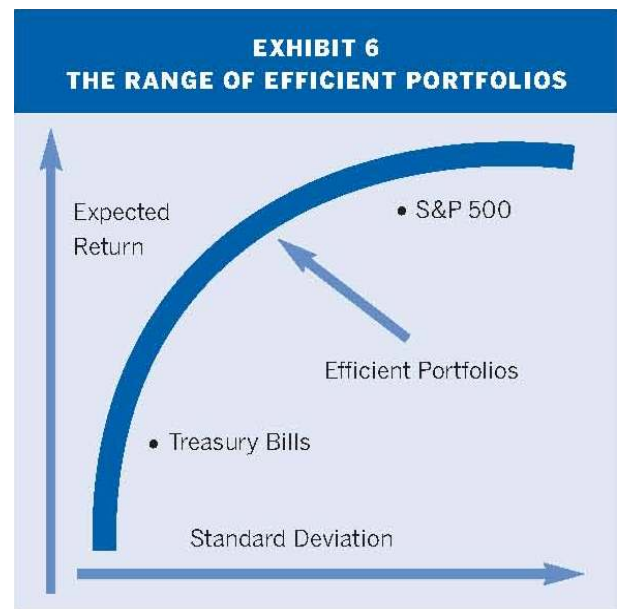

Concept Five: Design Portfolios That Are Efficient

How do you decide which investments to use and in what combinations? Since 1972, major institutions have been using a money management concept known as Modern Portfolio Theory. It was developed at the University of Chicago by Harry Markowitz and Merton Miller and later expanded by Stanford professor William Sharpe. Markowitz, Miller and Sharpe subsequently won the Nobel Prize for Economics for their contribution to investment methodology.

The process of developing a strategic portfolio using Modern Portfolio Theory is mathematical in nature and can appear daunting. It's important to remember that math is nothing more than an expression of logic, so as you examine the process, you can readily see the common sense approach that it takes—which is counter-intuitive to conventional and over-commercialized investment thinking. Markowitz has stated that, for every level of risk, there is some optimum combination of investments that will give you the highest rate of return. The combinations of investments exhibiting this optimal risk/reward trade-off form the efficient frontier line. The efficient frontier is determined by calculating the expected rate of return, standard deviation and correlation coefficient for each institutional asset class fund and using this information to identify the portfolio at the highest expected return for each incremental level of risk.

By plotting each investment combination, or portfolio, representing a given level of risk and expected return, we are able to describe mathematically a series of points or "efficient portfolios." This line forms the efficient frontier. It's important to note that, while a portfolio may be efficient, it is not necessarily prudent. Most investor portfolios fall significantly below the efficient frontier. Portfolios such as the S&P 500, which is often used as a proxy for the market, fall below the line when several asset classes are compared. Investors can have the same rates of return with an asset class portfolio with much less risk, or higher rates of return for the same level of risk.

Exhibit 6 illustrates the efficient frontier relative to the "market." Rational and prudent investors will restrict their choice of portfolios to those that appear on the efficient frontier and to the specific portfolios that represent their own risk tolerance level. You want to ensure that, for whatever risk level you choose, you have the highest possible return on the efficient frontier so that you can maximize the probability of achieving your financial goals.

Rockwood Wealth Management & The Informed Investor

Your Next Steps:

Given today's market volatility, one of the most important things you can do as an investor is to ensure that your investment plan is current. Your plan should examine where you are now and where you need to go to realize your financial goals, and should also identify the gaps you need to overcome.

It's important to recognize that it's very difficult to be good at all things. Because most of us are not wired, from an emotional standpoint, to effectively develop and maintain our investment plan, you may want to consider working with a qualified financial advisor. One major survey of affluent investors found that 90.2 percent of them want to work with financial advisors. The key is to find an advisor who will implement the five key concepts we've discussed here.

If you do choose to work with a financial advisor to update and implement your investment plan, you should be aware that not all advisors will approach your investments in the same way. There are two types of advisors: those who are *transactional* and those who are *consultative*. The difference? Transactional advisors are primarily focused on recommending a variety of investment products to their clients. Consultative advisors, on the other hand, are primarily concerned with offering their clients a consultative approach that will help them meet their clients' investment needs. Because consultative advisors are committed to uncovering your true financial needs and goals, and crafting a long-range investment plan that will meet those needs and goals over time, we recommend that you choose the consultative approach.

And what should you expect from a consultative advisor? The most successful consultative advisors use a systematic process, usually spread over a series of meetings, to design an investment plan that maximizes the probability of achieving your financial goals. These meetings typically involve the following:

- **A discovery meeting.** The advisor will determine your current financial situation, where you want to go and the obstacles you face in achieving what is important to you.
- **An investment plan meeting.** The advisor, using the information he or she gathered at your first meeting, will present to you a complete diagnostic of where you are now and specific recommendations for how you can bridge the identified gaps in order to achieve your goals.
- **A mutual commitment meeting.** At this meeting, assuming that the advisor can truly add value, both you and the advisor will decide to work together. You will now officially become a client.
- **Follow-up meetings.** These meetings are typically held quarterly (but can be more or less often, depending on your specific needs) and are when the advisor reports to you the progress you're making towards achieving your goals.

You should always expect outstanding service from any financial advisor you choose. Your phone calls should be returned on the same day, you should receive quick and complete responses to all your questions, you should be able to meet with your advisor as often as you wish, and your advisor should always take your unique needs and preferences into account. In short, you should expect to be treated like what you are—a

Rockwood Wealth Management & The Informed Investor

very important client. If you are currently working with a financial advisor and are unsure if he or she is using a consultative approach or the proven methodologies we've discussed here, you should have another advisor complete a diagnostic of your situation so that you can have a second opinion.

This is an exciting and challenging time to be an investor. There are many things going on around the world that will make the next few years extremely rewarding—if you design your investment plan to be successful. You owe it to your family and yourself to make sure that your investment plan is designed to not only deal with the changes you've experienced during the last few years of market volatility, but more importantly, to also take advantage of the opportunities to maximize the probability that you will achieve all your financial goals. We wish you nothing but success in achieving all that's important to you.

Firm Background and Philosophy

Rockwood Wealth Management is a wealth management firm based in New Hope, Pennsylvania and Annapolis, Maryland. A commitment to a client-centric practice and unwavering integrity in all of our endeavors ensures that our clients' best interests are always our best interests. We specialize in working with high-net worth clients, helping them to streamline their financial affairs while offering high-level expertise for asset management, tax & financial planning, risk management, private banking and estate planning.

Rockwood offers a disciplined and process driven approach to helping our clients accomplish what is most important to them. We provide a meaningful, consistent relationship with an advisor who knows you, your values, your family and what is truly important to you in life.

Fee-Only Independence means that we remain unbiased in our advisor-client relationship as we accept no referral fees or commissions in any aspect of our practice. Fee-Only is more than a description of compensation; it dictates that our interests are naturally aligned with our clients. The result is unbiased financial advice rendered by our advisors who are committed to acting as a fiduciary in a client-centered relationship. Rockwood Wealth Management works hard to preserve our station as an independent firm, void of conflicts of interest, and dedicated to the loyal pursuit of satisfying our clients.

Rockwood Wealth Management & The Informed Investor

About the Advisors at Rockwood Wealth Management

Brian D. Booth

Brian D. Booth is the Managing Member of Rockwood Wealth Management. He has twenty years of experience in personal wealth management where he focused exclusively in the areas of asset management, financial and estate planning, private banking, trust and fiduciary matters.

Brian has a Masters of International Business from the Edinburgh Business School, UK and received his Bachelor of Arts from Rutgers University. He has been a CERTIFIED FINANCIAL PLANNER™ (CFP®) practitioner since 1994 and became Certified Trust & Financial Advisor (CTFA) in 1996. He is member of National Association of Personal Financial Advisors (NAPFA), the Philadelphia Estate Planning Council, the Bucks County Estate Planning Council and the Institute of Certified Financial Planners. He is also President Emeritus of the Princeton Committee on Foreign Relations and a member of the Union League of Philadelphia.

John R. Augenblick

John R. Augenblick is committed to the development and growth of Fee-Only comprehensive financial planning as an active member of the National Association of Personal Financial Advisors. With expertise well respected in the community, he writes a finance column for the Bucks County Herald independent newspaper and serves on the board of directors of Team Capital Bank. John works with his local community by volunteering his time as a member of the Finance Committee for the New-Hope Solebury School District.

John graduated from the United States Naval Academy with distinction, earning a degree in Systems Engineering. While teaching engineering at the United States Naval Academy, John earned his MBA at Johns Hopkins University where he focused his studies on portfolio development, investment analysis, and corporate management. John is a CERTIFIED FINANCIAL PLANNER™ practitioner and has earned a Certificate in Financial Planning from Florida State University.

Thaddeus (Ted) N. Toal, Jr.

Ted is a senior partner of Rockwood Wealth Management and runs the Annapolis, MD office. Dissatisfied with the level of client care in the broker-dealer/commission model, Ted became a fierce client advocate and adopted a Fee-Only business model as he launched an independent firm, Toal & Associates. Today he is an active member of the National Association of Personal Financial Advisors and the Institute of Certified Financial Planners.

Ted, a CERTIFIED FINANCIAL PLANNER™ practitioner, graduated from Towson University with a Bachelor of Science degree and received his Certificate in Financial Planning from Florida State University's Center for Professional Development.
